The best Lenovo laptops were created with gamers in mind. Lenovo is a reliable brand for gaming PCs because of their powerful processors, but be careful since not all models are made of single growth. Lenovo laptops are known for being innovative with sleek design and reliable processors. Some Lenovo laptops even make a list of the best gaming laptops from all the brands on the market! Lenovo Legion Y740 in lenovo.com is our best choice for gaming. When looking for the next Lenovo, think about the features that you want it to possess. Thinking about TrackPoint, design, and your personal gaming needs are a good starting point in deciding which is right for you. This innovative company makes great hybrids and rotating screen models too. The best Lenovo laptops can easily fit in and elevate your lifestyle to new heights. Also, be sure to check out our ever-updated guide to the best laptop deals going on right now, for big machines at steep discounts. With a 14-inch, 1920 x 1080-pixel IPS display, Intel Core i5 processor, 8GB of RAM and 256GB of SSD, the ThinkPad X1 Yoga is a complete package. It really does all the machine, thanks to its 2-in-1 convertible design, 11 hours of battery life and lightweight (2.8 pounds), sturdy build. The full-size backlit keyboard is resistant to spilling and is drawn into the body of the machine when not used in 2-in-1 mode. In addition, the X1 undergoes extreme condition tests to meet military specifications for durability, which offers users the peace of mind that X1 yoga can handle a bit of wear on the go. Chromebooks occupy an interesting place in the computer market. On the one hand, they really aren't that flashy or powerful, but on the other hand, they're exceptionally affordable, so you can ignore some of the performance features. It's a mind, the Lenovo Flex 11 is a great option. The 11.6-inch display offers a 1,366 x 768-pixel HD touchpad that fits a 2-in-1 machine, as well as a 360-degree hinge. The Lenovo Flex 11 runs a 2.1GHz processor with 4GB of DDR2 RAM, which is not lightning fast, but because Chrome OS is a light system, you shouldn't really notice. What's impressive about this laptop is the build and battery life. The exterior doesn't slide, so it's harder to fall, but if you manage to reset it, it's falling resistant from as high as a couple of feet. The machine is also waterproof and dust resistant and has enough battery life to withstand up to 10 hours of use on a single charge. There's no shortage of budget gaming laptops, but few are capable. Legion Y540 from Lenovo. The old black and red colorway has gone in favor of a more refined aesthetic. Smooth hardware looks (and feels) more expensive than it's price, and the unique hinge is slightly offset from the back of the laptop to provide a slimmer profile. The body is about as heavy as expected for a gaming laptop, and five hours of battery life are pretty standard, too. The Y540 power is a highly customizable list of specifications, starting with the 9th generation Intel processor along with a number of graphics processors from Nvidia, from GTX 1650 to 1660 Ti (RTX 2060 is also available if ray tracking is a priority). The 720p HD camera with built-in microphone makes it easy to play online and stream yourself while playing, which helps 802.11AC with 2x2 MIMO technology. Lenovo's latest addition to the Y-series gaming laptop is a true study of what makes a great, balanced laptop for gaming. It is centered on an 8th-generation i7 processor with a standard speed of 2.2 GHz, but it can accelerate to 4.1 GHz. You can opt for up to 32GB of DDR4 RAM while the revamped NVIDIA GeForce RTX 2070 with its 8GB of dedicated RAM means you'll have great graphics performance. Top-notch visuals are important because this laptop puts a 15.6-inch FHD screen front and center, setting it out with very thin framing and energizing things with 300 nits of brightness and HDR support. Being a proper gaming laptop, there is also RGB lighting on board to customize your look, both under the keys and shiny of side vents, which, on most gaming laptops, are usually just black. Key switches are also interesting, as they are updated by Corsair switches so that Lenovo promises 100% anti-ghosts. So not only does this gaming laptop look like a part, but it also has to play and handle decently well. You're not going to get the full on mechanical gaming keyboard performance out of it, but given the slim key profile, it's still pretty impressive overall. Lenovo knows how to do business laptops correctly. The company acquired IBM's PC business in 2005 and after that, Lenovo focused most of its laptops on serving the needs of the business community. The Ideapad 510, a new addition to the Lenovo family, is a great successor to the ThinkPads of previous years. The Ideapad 510 runs under the Windows 10 model and has a 15.6-inch IPS display with a resolution of 1920 x 1080. This configuration has 8GB of DDR4 RAM, a 1TB hard drive, a 2.7GHz Intel Core i7 processor and a NVIDIA GeForce 940MX graphics card. This ensures that all your business programs are and more smoothly. It's admittedly a bit heavy at 4.8 pounds, but it fits many business laptops. As for the ports, this device has two USB 3.0, one USB 2.0, audio socket, VGA, HDMI, LAN and 4-in-1 card reader. It also reads CDs and supports Blu-ray Play if you want a break from all your work to watch the movie. The fifth generation Lenovo ThinkPad 11e line may have been designed for on-the-go use. First, the thing is built like a tank - almost literally. The vehicle has withstood 12 tests of military-grade materials, as well as 200 tests for durability. It's water. Water, and can withstand falls of up to three feet (conveniently the height of the student's middle table). Add to that the fact that it weighs less than 3 pounds and it's the perfect laptop for students and frequent business travelers. The Lenovo ThinkPad 11e even has a battery that they claim can last up to 12 hours, so you won't be tied to sockets at every turn. This particular model gives you a quad-core 1.1GHz processor and 4GB of the latest DDR4 RAM to keep up with your daily tasks. There's a 128GB solid hard drive giving adequate storage and an 11.6-inch anti-glare screen gives you a resolution of 1,366 x 768 pixels. There's even an on-board UHD Integrated Map Intel Graphics for gaming and clear video playback. All in all, it's a big little laptop to throw in a backpack or travel bag. The Miix tablet line is Lenovo's response to Microsoft's popular Surface line. The computer itself is actually just a supercharged tablet, but there is a keyboard that is fastened through a super-strong, 256-piece watchband hinge that serves as a case to fold it close like a laptop. The 12-inch removable display, with a resolution of 1920x1200 pixels, goes well with the decently loud Dolby speaker system, making it great for long trips where you need to ignite some fun. The model also runs an Intel quad-core processor and 256GB of SSD PCIe storage for all your standard laptop needs. One of the coolest features that brings this 2-in-1 firmly into the tablet area is that it offers a 2MP front-facing camera and a 5MP rear camera, so it will behave like a mobile device whenever you want and a laptop whenever you need. There's even a Lenovo Active Pen that allows you to access interesting workflows and gestures, much like the Samsung S Pen or Apple Pencil. This Lenovo Yoga 920 is the most essential PC on this list, and with a price tag to match. First, it's Ultrabook so naturally you get the latest (8th gene) Intel i7 processor offering 1.8GHz quad-core performance. Pair this with 16GB of RAM, and you have a pro machine capable of standard computing in general before editing video. There's also a seriously massive 1TB solid disk that, due to its solid state of nature, will further increase processing speed. Now the display. This 13.9-inch beauty gives you a 4K, 3840 x 2160 pixel resolution by putting it on a noc-knock with the best laptop displays on the market. The 620 special graphics card will also enhance visual performance. It comes in sleek platinum silver and weighs just over 3 pounds, so build a premium, too. Ultimately, it's a world-class machine with a world-class Ultrabook processor. With a battery that can get up to 18 hours of use in the best conditions, the Lenovo ThinkPad T460 costs more than Look. Powered by Intel Core i5 2.3GHz processor, 4GB of RAM and 500GB of hard drive paired with 14-inch, 1366 x 768-pixel display, the T460 is ready for action. The utilitarian design is in the right fit with the rest of the Lenovo ThinkPad lineup in that it is not the computer that you buy for the exterior. Aside from aesthetics, the 3.8-pound machine is noticeably heavier than modern Ultrabooks and jumps to 4.2 pounds with a high-capacity battery. For business users, adding a security fingerprint scanner makes it suitable for both the office and the road. In addition, the waterproof keyboard follows suit with an excellent Lenovo input experience paired with an equally excellent responsive touchpad. TrackPoint - This is a little red nub in the middle of the keyboard that IBM (and now Lenovo) laptops are famous for. It serves the same basic function as a trackpad or mouse, but you can use it without moving your hand away from the keyboard. If you're a trackpoint fan, you'll want to look for the Lenovo IdeaPad. Model and Design - Lenovo makes many different types of laptops, including traditional models, touch options, and 2-in-1 hybrids. If you're interested in a touchscreen laptop with a rotating screen, look for yoga or Flex. If you want a 2-in-1 hybrid that can be used as a laptop or tablet in the same vein as Microsoft Surface, look for Miix. Gaming Performance - Games can be tough on laptops because most have weak on-board graphics. Some ThinkPads and IdeaPads are equipped with fairly decent graphics cards, but they're not really designed with games in mind. If you want to play newly released games in higher graphics settings, look for Lenovo Legend. Legend. lenovo g570 laptop price. lenovo g570 laptop battery. lenovo g570 laptop body. lenovo g570 laptop specifications. lenovo g570 laptop charger. lenovo g570 laptop battery original. lenovo g570 laptop drivers. lenovo g570 laptop keyboard
